COVER NOTE

From:	General Secretariat of the Council
To:	Delegations
Subject:	DORA Regulation - Three-column table to commence trilogues

Delegations will find attached the three-column table on the above-mentioned draft Regulation.

Encl.

Proposal for a Regulation of the European Parliament and of the Council on digital operational resilience for the financial sector and amending Regulations (EC) No 1060/2009, (EU) No 648/2012, (EU) No 600/2014 and (EU) No 909/2014

11	(1) In the digital age, information and communication technology (ICT) supports complex systems used for everyday societal activities. It keeps our economies running in key sectors, including finance, and enhances the functioning of the single market. Increased digitalisation and interconnectedness also amplify ICT risks making society as a whole - and the financial system in particular - more vulnerable to cyber threats or ICT disruptions. While the ubiquitous use of ICT systems and high digitalisation and connectivity are nowadays core features of all activities of Union financial entities, digital resilience is not yet sufficiently built in their operational frameworks. 15	(5) Despite national and European targeted policy and legislative initiatives, ICT risks continue to pose a challenge to the operational resilience, performance and stability of the Union financial system. The reform that followed the 2008 financial crisis primarily strengthened the financial resilience of the Union financial sector and aimed at safeguarding the Union's competitiveness and stability from economic, prudential and market conduct perspectives. Though ICT security and digital resilience are part of operational risk, they have been less in the focus of the post-crisis regulatory agenda, and have only developed in some areas of the Union's financial services policy and regulatory landscape, or only in a few Member States. 20a		***(10a) Establishing and maintaining adequate network and information system infrastructures is also a fundamental precondition for effective risk data aggregation and risk reporting practices, which are in turn an essential requisite for the sound and sustainable risk management and decision-making processes of credit institutions. In 2013, the Basel Committee on Banking Supervision (BCBS) published a set of principles for effective risk data aggregation and risk reporting (BCBS 239) based on two overarching principles of governance and IT infrastructure, to be implemented by the beginning of 2016. In accordance with the Report of the European Central Bank (ECB) of May 2018 on the Thematic Review on effective risk data aggregation and risk reporting of May 2018 and the BCBS Progress Report of April 2020, the implementation progress made by global systemically important banks was unsatisfactory and a source of concern. In order to facilitate compliance and alignment with international standards, the Commission, in close cooperation with the ECB and after consulting EBA and ESRB, should produce a report in***

Where applicable, competent authorities should take into account in their supervisory activities the ICT risks caused to financial entities by financial entities providing ICT services.**

	Commission Proposal	EP Mandate	Council Mandate
			Likewise, due to the existing risk monitoring mechanisms at group level, the same exemption should be introduced for ICT third-party service providers delivering services exclusively to entities of their group.
Recital 57a			
67a			**(57a) The digital transformation experienced in financial services has brought about an unprecedented usage of and reliance on ICT services. Since the provision of financial services has become unimaginable without cloud computing services, software solutions and data-related services, the Union financial ecosystem has become intrinsically co-dependent on certain ICT-related services provided by ICT service suppliers. Some of these companies, innovators in developing and applying ICT-based technologies, play a significant role in the delivery of financial services, or have become integrated in the financial services value chain. They have thus become critical to the stability and integrity of the Union financial system.** **This widespread reliance on the services supplied by critical ICT third-party service providers, combined with the interdependence between the information systems of different market operators, create a direct, and potentially severe, risk to the**

	Commission Proposal	EP Mandate	Council Mandate
			Union financial services system to the continuity of delivery of financial services if critical ICT third-party service providers were to be confronted with operational disruptions or major cyber incidents. Cyber incidents have a distinctive ability to multiply and propagate throughout the financial system at a considerably faster pace than other types of risk monitored in finance and can extend across sectors and beyond geographical borders. They may therefore evolve into a systemic crisis, where trust in the financial system has been eroded due to the disruption of functions supporting the real economy, or to substantial financial losses, reaching a level which the financial system either is unable to withstand, or which requires the deployment of heavy shock absorption measures. To prevent these scenarios from materialising and endangering the financial stability and integrity of the Union, the convergence of supervisory practices relating to ICT third-party risk in finance is essential, in particular through new rules enabling the Union-wide oversight of critical ICT third-party service providers. **The Oversight framework largely depends on the degree of collaboration between the Lead Overseer and critical ICT third-party service provider delivering to financial entities services affecting the supply of financial services.**

	Commission Proposal	EP Mandate	Council Mandate
			The successful conduct of the oversight is determined, among others, by the ability of the Lead Overseer to effectively conduct monitoring missions and inspections to assess the rules, controls and processes used by the critical ICT third-party service providers, as well as to assess the potential cumulative impact of their activities on financial stability and the integrity of the financial system. At the same time, it is crucial that critical ICT third-party service providers integrate the Lead Overseer's recommendations, concerns, perspectives and approaches. **Since a lack of cooperation by a critical ICT third-party service provider delivering services affecting the supply of financial services, such as the refusal to grant access to its premises or to submit information, ultimately deprives the Lead Overseer of its essential tools in appraising ICT third-party risk and could adversely impact the financial stability and the integrity of the financial system, it is necessary to provide for a commensurate sanctioning regime.**
Recital 57b			
67b			**(57b) Against this background, the need of the Lead Overseer to impose sanctions to compel critical ICT third-party service providers to comply with the set of transparency and access-related obligations should not be jeopardised by difficulties**

	Commission Proposal	EP Mandate	Council Mandate
			raised by the enforcement of those sanctions in relation to critical ICT third-party service providers established in third countries. In order to ensure the enforceability of such penalties, and as to allow a swift roll out of procedures upholding the critical ICT third-party service providers' rights of defence in the context of designation and issuance of recommendations, critical ICT third-party service providers, delivering to financial entities services affecting the supply of financial services, should maintain an adequate business presence in the Union. Due to the nature of the oversight, and the absence of comparable arrangements in other jurisdictions, there are no suitable alternative mechanisms ensuring this objective by way of effective cooperation with financial supervisors in third countries in relation to the monitoring of the impact of digital operational risks posed by systemic ICT third-party service providers. **Therefore, an ICT third-party service provider which has been designated as critical in accordance with this Regulation should undertake within 12 months of designation necessary arrangements to ensure the incorporation of a subsidiary in the Union in order to continue the provision of ICT services to financial entities in the Union.**
